

Leveraging added value from actionable data can only be achieved through complete control of both processed information and the software ecosystem accompanying it along its full lifecycle. This goal can be reached by guaranteeing an optimal container/content synergy and a full understanding of all aspects of your environment: human (enterprise knowledge, team skillsets), organizational, and technical.

Sycomor offers a global **expert consulting** solution, covering all aspects of **data management** and **software development** of platforms suited to this task. Our process is supported by proprietary methodologies and tools designed to ensure complete adequation of our suggested solutions to your environment, expressed needs, and requirements.

OPTIMIZE YOUR DEVELOPMENT PROCESS

Sycomor carries out a complete diagnosis of your environment and practices, suggests modular improvement strategies and supports you through change.

Improve the efficiency of your development structure:

- optimize your team setup and organization;
- evaluate your aggregated skill portfolio;
- adopt robust project management methods;
- update and evolve your technological ecosystem.

Increase development quality and productivity:

- agile methodologies;
- good programming practices;
- design and modeling;
- resource pooling and collaborative development.

TAKE ADVANTAGE OF YOUR DATA

Sycomor offers its in-depth understanding of data and knowledge management for targeted consulting missions: we can help you evaluate your needs, support your technology watch and accompany your evolution.

- big data : evaluate the relevance of new technologies for processing data and improving your business;
- knowledge management: formulate, structure, share and reuse your business knowledge;
- data integration: combine heterogeneous data into a greater whole to enrich your knowledge;
- data analysis: explore your actionable data and extract maximum value.

SYCOMOR, FOUNDED IN 2013

With fifteen years of experience developing high-value information management systems and analyzing complex data, in a wide array of functional environments (life sciences, imaging, research, engineering, energy, web...), Sycomor is devoted to applying its knowledge and know-how to your company's needs.
